

SUMMARY

With a background in computer science and experience as research assistant, I'm passionate about the design and implementation of algorithms to solve challenging problems and draw conclusions from data. I have a keen interest in data science – including the areas of optimization, machine learning, and natural language processing. I love working with open-source technologies, started 10 years ago and haven't stopped since then.

EDUCATION

- 2013–2015 **Master's degree, Information Systems & Technology.**
York University, Canada.
- *Thesis:* Efficient Calculation of Optimal Configuration Processes.
 - *Selected Courses:* Mining of Massive Datasets, Advanced Information Retrieval Systems, Introduction to Computational Linguistics.
- 2014–2015 **Data Science Specialization.**
A non-credit series offered by Johns Hopkins University through Coursera.
- *Selected Courses:* R Programming, Getting and Cleaning Data, Exploratory Data Analysis, Statistical Inference, Regression Models, Practical Machine Learning.
- 2006–2011 **Bachelor's degree, Computer Science.**
University of Havana, Cuba.
- *GPA:* 5.0/5.0 (Summa Cum Laude).
 - *Thesis:* Estimation of Distribution Algorithms Based on Copulas and Vines.
 - *Selected Courses:* Linear Algebra, Calculus, Probability & Statistics, Design & Analysis of Algorithms, Operating Systems, Computer Networks, Database Systems, Artificial Intelligence, Information Retrieval Systems.

TECHNOLOGIES Python – R – C – Java – HTML – CSS – JavaScript
SQL – Hadoop – Git – GNU/Linux system administration.

EXPERIENCE

- 2013–2015 **Research & Teaching Assistant.** York University, Canada.
- Designed different solution methods for the problem of optimizing the user interaction in a configuration process.
 - Developed techniques to improve the performance of search heuristics on multimodal optimization problems.
 - Programmed scientific software in Python (using NumPy, pandas, and SciPy), R, and MATLAB/Octave.
- 2011–2013 **Research Assistant.** Institute of Cybernetics, Mathematics and Physics, Cuba.
- Created new estimation of distribution algorithms (EDAs) using copulas and vines to model the probability distributions.
 - Implemented a group of R packages available on CRAN, and a C library for dependence modeling using vines.
 - Co-supervised a bachelor's thesis in computer science.

SELECTED OPEN-SOURCE SOFTWARE

- **configurator** – Python package providing different solutions to the problem of optimizing the user interaction in a configuration process.
<https://github.com/yasserglez/configurator>.
- **copulaedas** – R package for implementing and studying estimation of distribution algorithms (EDAs) based on copulas.
<https://github.com/yasserglez/copulaedas>.
- **vines** – R implementation of the vine graphical model for building high-dimensional probability distributions as a factorization of bivariate copulas and marginal density functions. <https://github.com/yasserglez/vines>.
- **ngram_profile** – Python library for text classification based on character n-grams. https://github.com/yasserglez/ngram_profile.
- **dml** – C library for dependence modeling using C-vines, D-vines and R-vines.
<https://github.com/yasserglez/dml>.
